Catastrophe modeling

Catastrophe modeling [1] (also known as **cat modeling**) is the process of using [computer](#)-assisted calculations to estimate the losses that could be sustained due to a catastrophic event such as a flood, hurricane or earthquake. Cat modeling is especially applicable to analyzing risks in the [insurance](#) industry and is at the confluence of [actuarial science](#), [engineering](#), [meteorology](#), and [seismology](#).

Scriptování

Denní chleba při práci s velkými daty a tisíci modely

The image shows a file explorer window on the left and a code editor window on the right. The file explorer displays a project structure for '145_Germany_Flood' containing various subfolders and Python scripts. The code editor shows a Python script with code related to processing flood hazard data.

Ukázky z rekonstrukce povodní 2024

Rekonstrukce záplav v centrální Evropě v září 2024

Na základě Rainfall-Runoff modelu a měřených průtocích na řekách

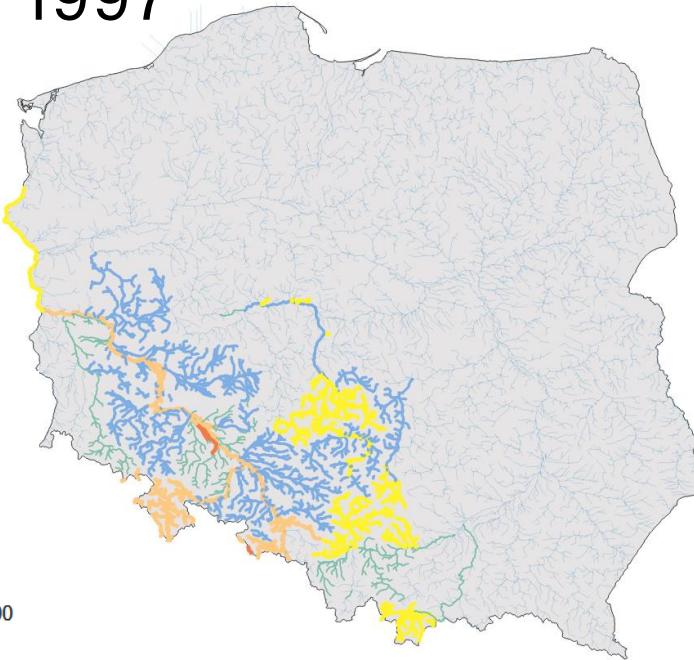

Porovnání velkých historických povodní v Polsku

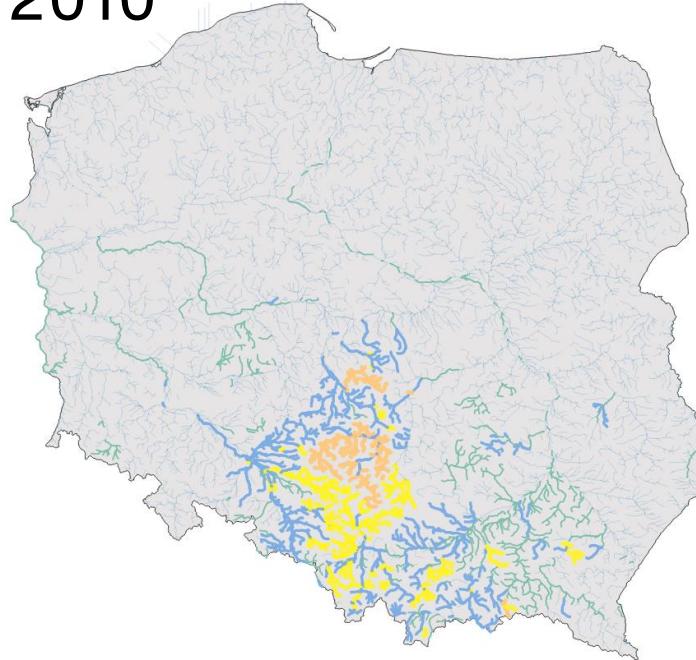

1997, 2010 a 2024

1997

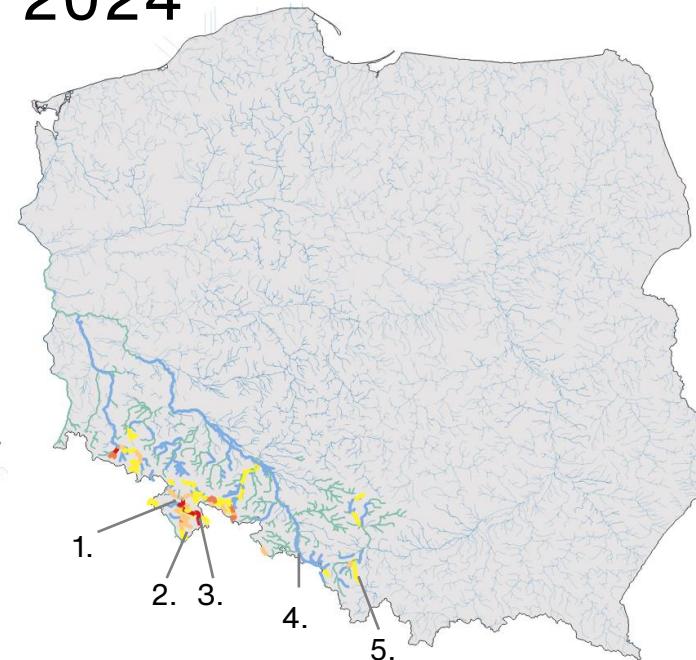

✓ RP 1:n [years]
✓ 0 - 20
✓ 20 - 50
✓ 50 - 100
✓ 100 - 200
✓ 200 - 500
✓ 500 - 1,000
✓ 1,000 - 10,000

2010

2024

Hladiny vody při letošní povodni v 09/2024 na některých místech dosáhli nových rekordů

1. Řeka Nysie Kłodzkiej v Kladsku - 798 cm. To bylo o 1,5 m více než předchozí rekordní stav vody z roku 1997.
2. Řeka Wilczka, suchý poldr v Międzygórze - 2 718 cm. Bylo to 33 cm nad předchozím rekordním vodním stavem z roku 1997.
3. Řaka Morawka, suchý poldr v obci Stronie Śląskie - ??? . 14 září voda v poldru začala přetékat bezpečnostním přelivem, podobně jako suchý poldr v Międzygórze. Bohužel následující den před poledнем došlo k protržení hráze tohoto poldru.
4. Odra v Krzyżanowicích (Slezské vojvodství), hranice s ČR - 914 cm. Tím byl vyrovnán rekord z roku 1997. Oproti roku 1997 byl průtok následně transformován novými poldry u Ratiboře.
5. Řeka Biała v Mikuszowicích (okres Bielsko-Biała) - 260 cm . Je to o 3 cm více než rekord z července 1970, kdy to bylo 257 cm .

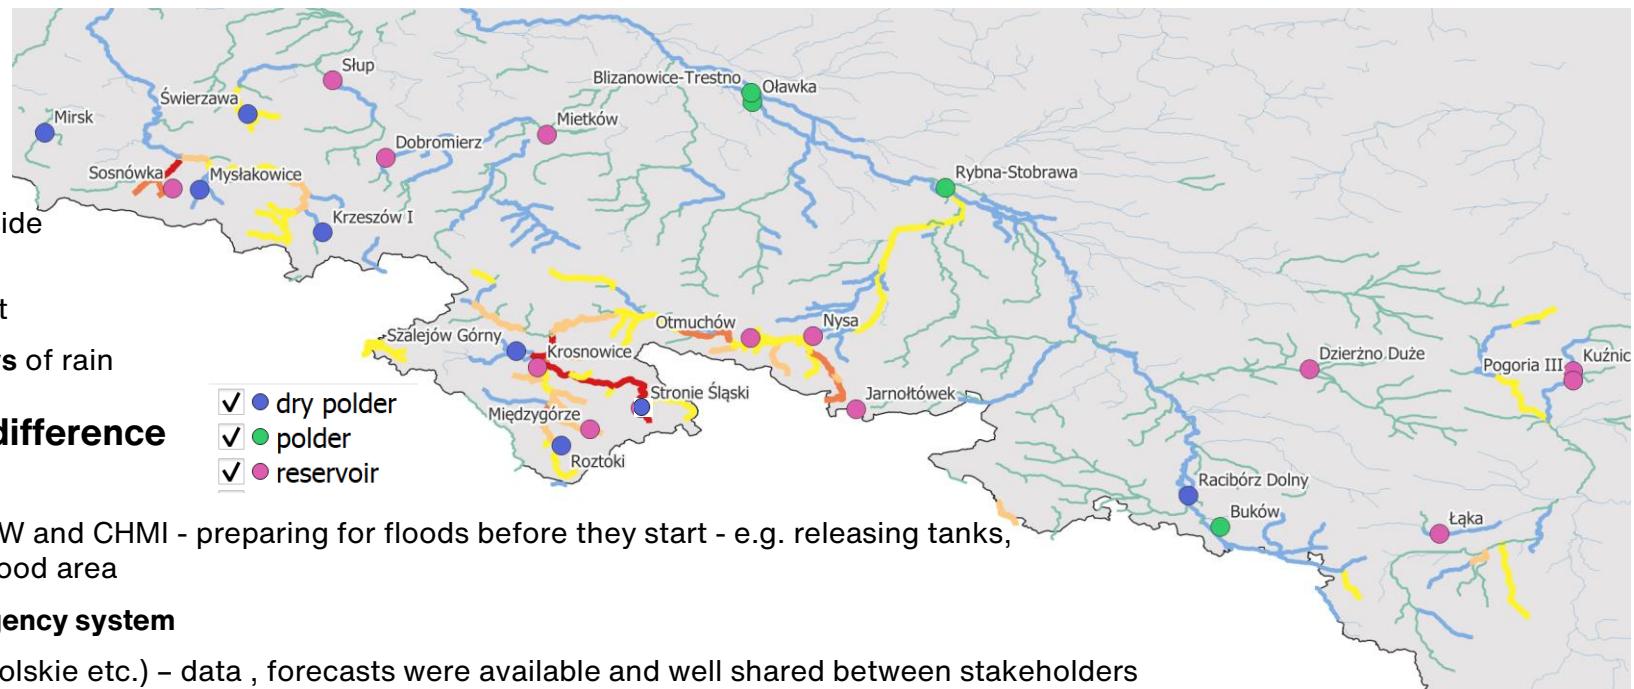

Povodeň 2024 vs 1997 v Polsku

Event 2024

- **smaller than 1997** – just south part of Odra river basin
- caused by **heavy rainfall**, mainly on both side of border with the Czech Republic
- the **land was unsaturated** before the event
- first **flood waves come hours-one-two days** of rain

Flood protection measures – main difference between 2024 and 1997

- First alerts **few days before rain** from IMGW and CHMI - preparing for floods before they start - e.g. releasing tanks, people started moving things out of the flood area
- **readiness** of all components of the **emergency system**
- **New information systems** (IMGW, Wody polskie etc.) – data , forecasts were available and well shared between stakeholders (e.g precipitations, flows, current situation and forecasts, status of individual flood protections etc.)
- Odra – New reservoirs, polders and dry polders – **Bukow and Ratiborz Dolny** significantly **transform flood wave** from Czech Republic at Odra river and protect several municipalities including Ratiborz, Opole and Wroclaw
- Nysa Kłodzka – Cascade of older and newer **reservoirs (Nysa, Otmuchow, Topola, Kozielno)** transform (despite levee failure of Topola) **flows from Kłodzko valley**
- **Dry polders and reservoirs in Kłodzko valley slow down** movement of **flood wave**, but their capacity was sometimes too small to extreme volume of flood wave. Failure of dry polder at Stronie Śląskie increase damage tens kilometers down the Biela Ladecka valley
- **Modernization of Wroclaw's flood protection measures** including more than 65km of levees, new bridges, Olawa bypass , Rybna polders etc. protect Wroclaw to flooding

Slova závěrem

Modelování povodňových škod & GIS

- **GIS je v CAT modelingu všude přítomný**
- **Umožňuje zpracovávat podrobnější a podrobnější data,**
- **Provádět více a více sofistikované analýzy,**
- **A pak vše zpět zjednodušit a**
- **Předat získanou informaci srozumitelně různým uživatelům k dalšímu použití na pár stránekách**

Děkuji za pozornost

Legal Disclaimer

Aon's Reinsurance Solutions business, part of Aon UK Limited (for itself and on behalf of each subsidiary company of Aon plc) ("Aon") reserves all rights to the content of this report ("Report"). This Report is for distribution to Aon and the organisation to which it was originally delivered only. Copies may be made by that organisation for its own internal purposes but this Report may not be distributed in whole or in part to any third party without both (i) the prior written consent of Aon, and (ii) the third party having first signed a "recipient of report" letter in a form acceptable to Aon. Aon cannot accept any liability to any third party to whom this Report is disclosed, whether disclosed in compliance with the preceding sentence or otherwise.

To the extent this Report expresses any recommendation or assessment on any aspect of risk, the recipient acknowledges that any such recommendation or assessment is an expression of Aon opinion only, and is not a statement of fact. Any decision to rely on any such recommendation or assessment of risk is entirely the responsibility of the recipient. Aon will not in any event be responsible for any losses that may be incurred by any party as a result of any reliance placed on any such opinion. The recipient acknowledges that this Report does not replace the need for the recipient to undertake its own assessment.

The recipient acknowledges that in preparing this Report Aon may have based analysis on data provided by the recipient and/or from third party sources. This data may have been subjected to mathematical and/or empirical analysis and modelling. Aon has not verified, and accepts no responsibility for, the accuracy or completeness of any such data. In addition, the recipient acknowledges that any form of mathematical and/or empirical analysis and modelling (including that used in the preparation of this Report) may produce results which differ from actual events or losses.

The Aon analysis has been undertaken from the perspective of a reinsurance broker. Consequently this Report does not constitute an opinion of reserving levels or accounting treatment. This Report does not constitute any form of legal, accounting, taxation, regulatory or actuarial advice.

Limitations of Catastrophe Models

This report includes information that is output from catastrophe models of Impact Forecasting, LLC (IF). The information from the models is provided by Aon Benfield Services, Inc. (Aon) under the terms of its license agreements with IF. The results in this report from IF are the products of the exposures modelled, the financial assumptions made concerning deductibles and limits, and the risk models that project the pounds of damage that may be caused by defined catastrophe perils. Aon recommends that the results from these models in this report not be relied upon in isolation when making decisions that may affect the underwriting appetite, rate adequacy or solvency of the company. The IF models are based on scientific data, mathematical and empirical models, and the experience of engineering, geological and meteorological experts. Calibration of the models using actual loss experience is based on very sparse data, and material inaccuracies in these models are possible. The loss probabilities generated by the models are not predictive of future hurricanes, other windstorms, or earthquakes or other natural catastrophes, but provide estimates of the magnitude of losses that may occur in the event of such natural catastrophes. Aon makes no warranty about the accuracy of the IF models and has made no attempt to independently verify them. Aon will not be liable for any special, indirect or consequential damages, including, without limitation, losses or damages arising from or related to any use of or decisions based upon data developed using the models of IF.

Additional Limitations of Impact Forecasting, LLC

The results listed in this report are based on engineering / scientific analysis and data, information provided by the client, and mathematical and empirical models. The accuracy of the results depends on the uncertainty associated with each of these areas. In particular, as with any model, actual losses may differ from the results of simulations. It is only possible to provide plausible results based on complete and accurate information provided by the client and other reputable data sources. Furthermore, this information may only be used for the business application specified by Impact Forecasting, LLC and for no other purpose. It may not be used to support development of or calibration of a product or service offering that competes with Impact Forecasting, LLC. The information in this report may not be used as a part of or as a source for any insurance rate filing documentation.

THIS INFORMATION IS PROVIDED "AS IS" AND IMPACT FORECASTING, LLC HAS NOT MADE AND DOES NOT MAKE ANY WARRANTY OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, WITH RESPECT TO THIS REPORT; AND ALL WARRANTIES INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED BY IMPACT FORECASTING, LLC. IMPACT FORECASTING, LLC WILL NOT BE LIABLE TO ANYONE WITH RESPECT TO ANY DAMAGES, LOSS OR CLAIM WHATSOEVER, NO MATTER HOW OCCASIONED, IN CONNECTION WITH THE PREPARATION OR USE OF THIS REPORT.
